

I will be writing a mainly text entry since I didn't do much this week as i expected PCBs to come in but they didn't. I worked on the CAD for the actuators. Primarily the vent. My vent design ended up being 80mm x 80mm to match the profile of the fan(same dimensions) this was done on Friday 10/25 as well as 3d printing and assembly. Heat inserts are ordered

to secure the fan.
